

Release Notes

Week 4:

- Updated the map to use polygon outlines of parking lots rather than queried markers.
- Updated the way we store lot data
- Started work on the user's account page
- Made changes to the "submit form" modal
- Made it so user can start parking session
 - Session updates lot information in info window

Week 3:

- Added map to home page
- Changed it so user must be logged in to access home page/map (protected route)
- Added test cases
- Implemented get routes for all pages
 - Added post route for register page so users can be inserted into database
 - Added post route so user can log in
- Made edits to docker so that containers close better

Week 2:

- Set up docker
- Added to home page
- Added databases for reports, lots, and users, and inserted one lot into the database to use as a tester
- Gained list of lots and their number of spaces
